AI-POWERED CREATIVE WORKFLOW

From Prompt to YouTube

How I used AI + LLM prompting to build
a complete 4K ambient video from scratch

Midjourney | Suno | DaVinci Resolve 20 | Claude AI

Daniel | AI Content Creator / Prompt Engineer

STEP 01

The Vision

I wanted to create a Blade Runner-inspired ambient video — a lone figure walking through a dystopian nighttime snowscape.

The goal: use AI tools + an LLM (Claude) to guide every step of the process from concept to a live YouTube video in a single day.

KEY INSIGHT

I used Claude (LLM) not just for prompts —
but as my guide through the entire workflow.

STEP 02

Crafting the Midjourney Prompt

Used Claude to engineer a detailed cinematic prompt describing the exact scene, mood, lighting, and photographic settings.

A lone silhouette figure walking away in the far distance along a wet snow-melted sidewalk between two colossal brutalist monolithic structures at night, dystopian atmosphere, real life photography, the massive buildings rise out of frame with smooth featureless concrete-like alien surfaces, no signage or markings, sparse narrow windows emitting a faint amber warm glow from within, dim neon accent lights embedded along the building edges casting muted teal and deep orange hues, a row of low 3-foot glowing blue pole lights lines the sidewalk casting cold blue reflections on the wet pavement below, light snow dusting on the ground with the path cleared and reflective, figure is small and distant emphasizing isolation and scale, silent lonely mood, cold foggy air with volumetric light haze, extraterrestrial architectural design, ultra cinematic composition, deep shadows, muted color palette with blue and amber contrast, shot on Canon R5, f/2.8, ISO 3200, long exposure, photographic, Roger Deakins lighting

STEP 03

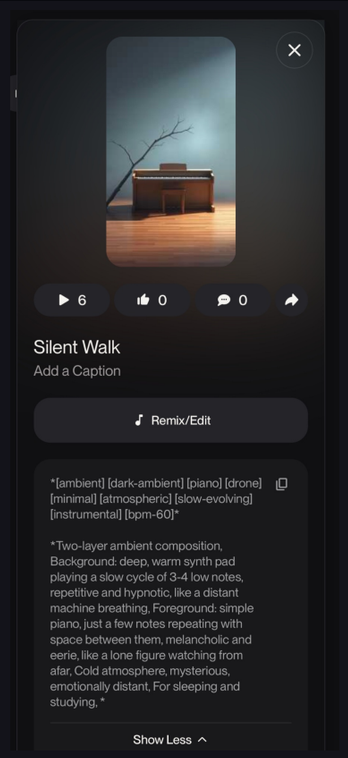
Image Generation
& 4K Upscaling

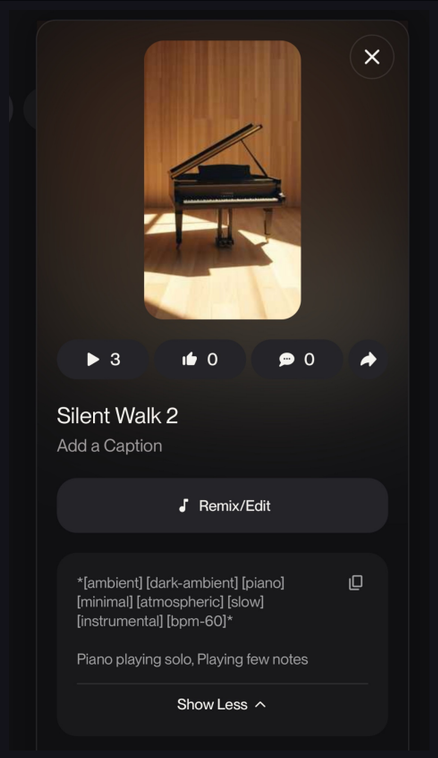
Generated in Midjourney, then upscaled to 4K using the Subtle Upscale feature.

STEP 04

AI Music with Suno

Composed two ambient tracks using detailed Suno prompts — dark ambient, piano drone, bpm-60, atmospheric.





STEP 05

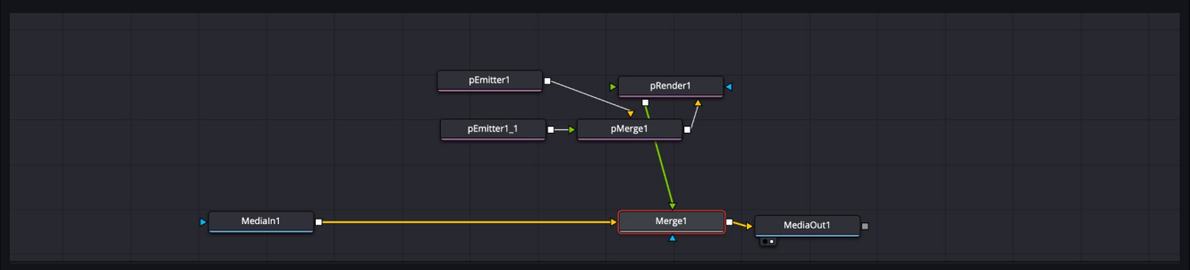
Color Grading in DaVinci Resolve 20

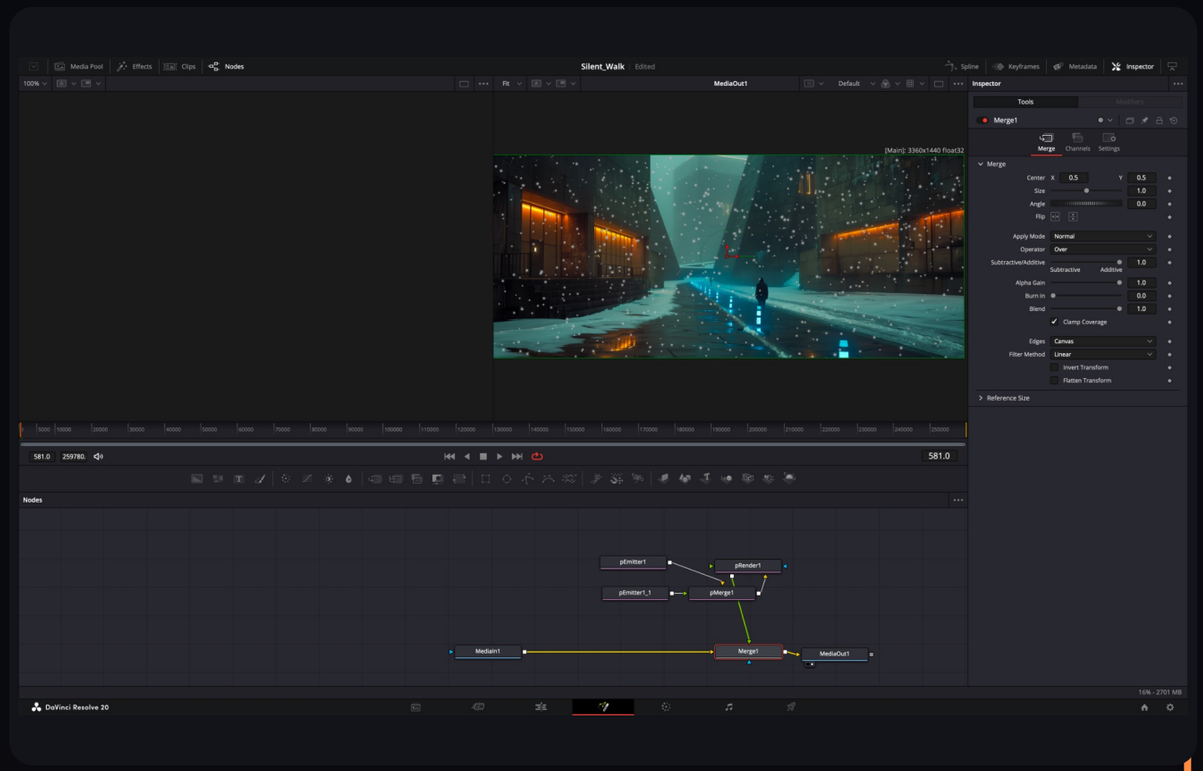
Claude guided me through a manual Blade Runner teal & orange grade using Lift, Gamma and Gain color wheels.

STEP 06

Snow Effects in Fusion

Built dual pEmitter particle systems in DaVinci Fusion for depth layering, merged over the image using Screen mode.

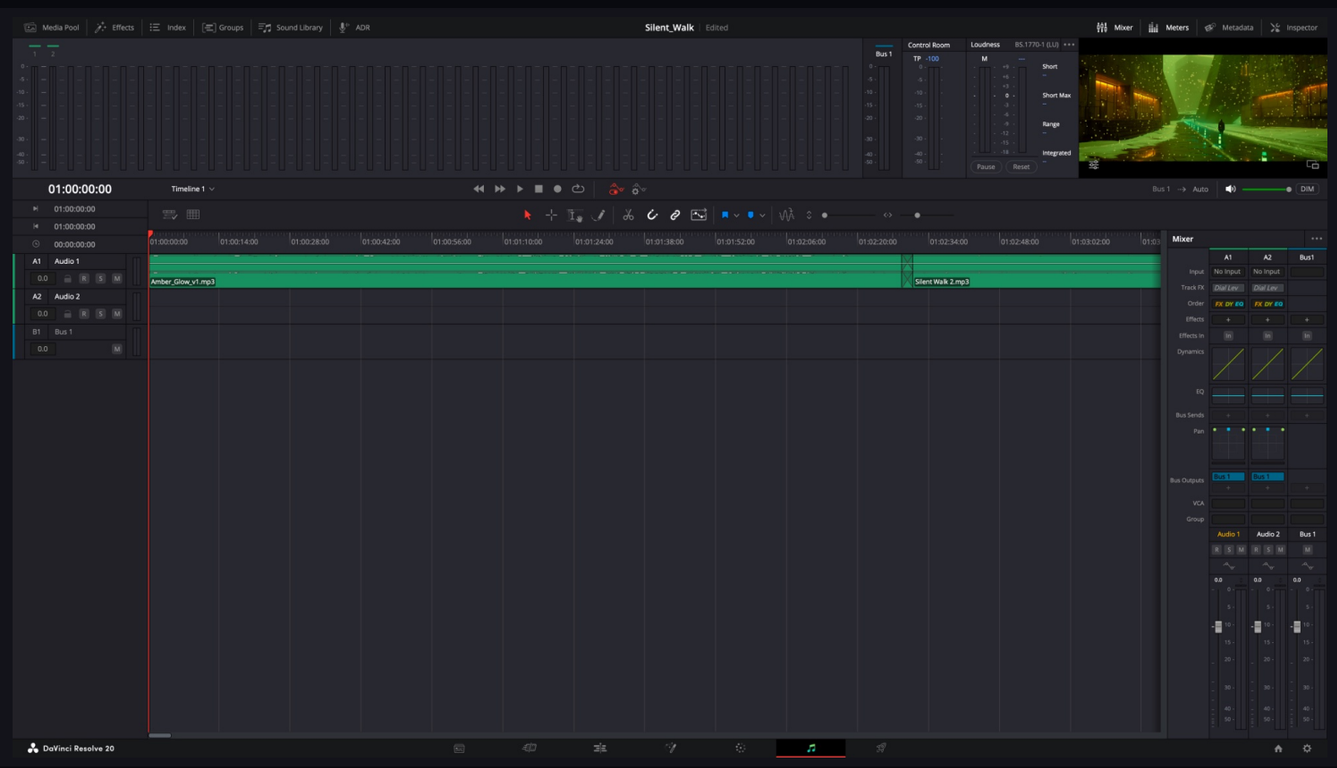




STEP 07

Audio Editing
& 3-Hour Loop

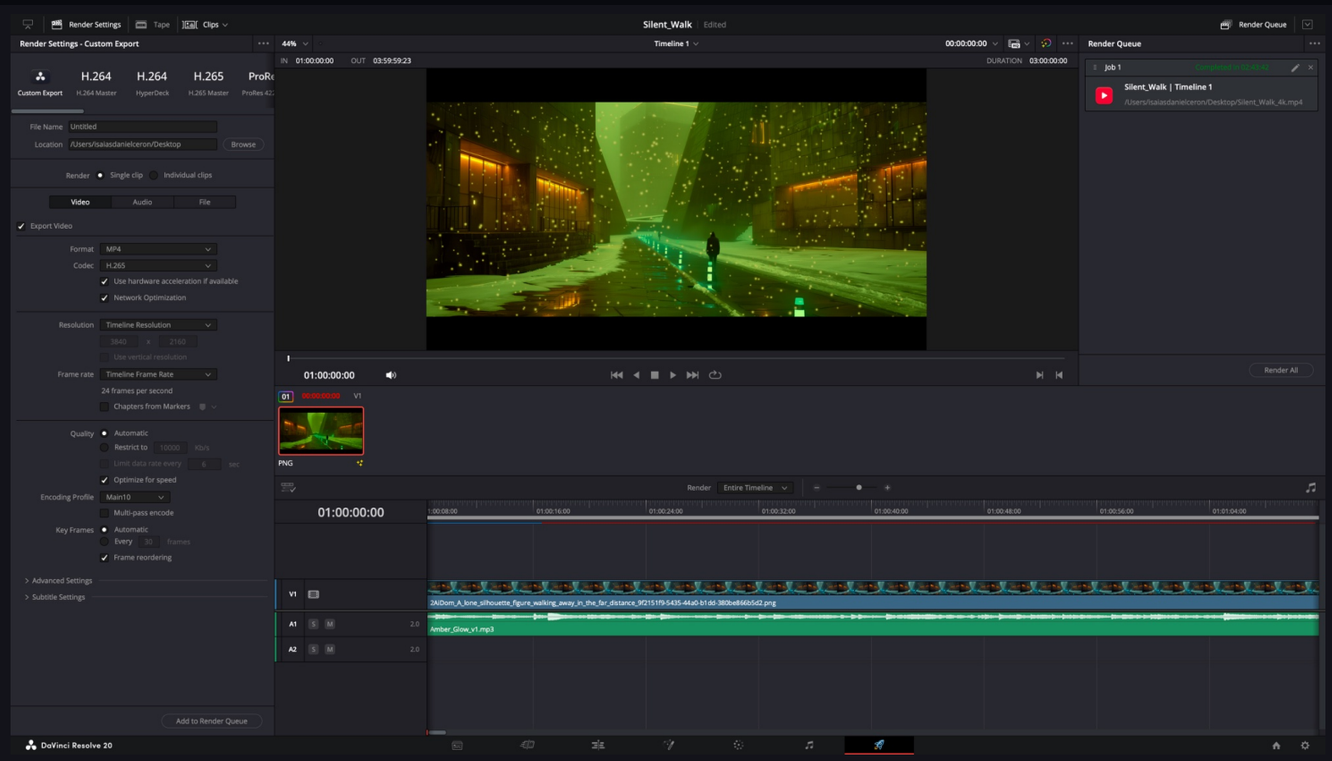
Arranged two Suno tracks with crossfades, looped the sequence to fill 3 hours using a doubling copy-paste method.



STEP 08

4K Export
& YouTube Upload

Exported as H.265 MP4 at 3840x2160
using YouTube preset in DaVinci Resolve.
Uploaded to Sound Realm Studio.



RESULT

Live on YouTube
Sound Realm Studio

Silent Walk / Bladerunner Ambient 4K
For Sleep, Study & Relaxation / 3 Hours
